

EXAMINER'S RESTRICTION:

Claims 1 and 13 are generic to a plurality of disclosed patentably distinct species comprising Fig. 1, Fig. 2, Fig. 3, and Fig. 4. The Examiner has required under 35 U.S.C. § 121 to elect a single disclosed species and list the claims that read thereon.

ELECTION AND REMARKS:

Responsive to Examiner's Restriction Requirement, Applicant elects, without traverse, the species of the invention depicted in Fig. 4. In addition to claims 1 and 13 which are designated in the Action as being generic, it is respectfully asserted that new claim 26 is also generic. All 26 claims read on the species of the invention depicted in Fig. 4.

Applicant has amended the claims to clearly recite Applicant's invention.

Further, Applicant makes the following observation based on a review of the art presently of record. In the present claims, it is recited that a bleed valve 12 is controlled in dependence on the pressure in the turbine compressor. This can be particularly contrasted with the disclosure of US 3,710,576 to *Evans*, and in which a valve (clearly illustrated and discussed with respect to Fig. 8 of that patent) is controlled by a separate hydraulic pressure that is governed by the state of the dynamic braking clutch (more particularly, see column 9 of the *Evans* patent).
